

We put the **JET** in Ink Jet!!!

As one of the world's largest independent manufacturers of electroformed inkjet nozzle plates, we give our inkjet printer customers the ability to design printheads that put the right size and shape ink drop in the right place.

Also, our precision electroforming technology lets design engineers apply inkjet technology to many other applications where precision jetting of fluids or gasses is required. We can provide orifice plates with apertures as small as 2 microns for:

- Precision Dispensers
- Aerosol Sprayers
- Particle Separators
- Blood Analyzers
